PROFESSIONAL SUMMARY

ServiceNow Consultant and Developer with 5+ years delivering enterprise ServiceNow implementations end to end: requirements gathering, solution design, configuration and custom development, integration, UAT, release management and Level 3 production support. ServiceNow Certified System Administrator (CSA), Certified Application Developer (CAD) and Certified Implementation Specialist – ITSM (CIS-ITSM); ITIL Foundation. Specialist in ITSM, Scripted REST API and IntegrationHub integrations, custom scoped applications, Service Portal, Flow Designer automation and evidence-based root-cause analysis on live production instances. Strong stakeholder management with customers, business analysts and delivery teams in Agile/Scrum environments.

KEY ACHIEVEMENTS

- Corrected 800+ production records across six separate data-integrity defects — every fix preceded by a scripted impact scan, dry-run validation and stakeholder sign-off, with zero rollbacks.
- Designed and delivered a partner-facing REST API (create/read/update case, create incident) plus an end-to-end circuit cease and early-termination flow in Flow Designer, now used daily by an external wholesale portal.
- Built a token-secured Subcontractor Portal over 12 user stories and multiple sprints, giving field partners without platform accounts job details, asset search and completion sign-off via email/SMS links.
- Ran a platform-wide billing-automation analysis covering 5,500+ projects, disproved three assumed root causes with direct evidence and handed Finance a verified list of unbilled work.
- Traced a project-financials sync failure to a single case-sensitive comparison in a Business Rule; verified the fix by simulation against live data before release, then repaired all 23 affected projects.
- Reverse-engineered and documented an undocumented outbound web-services layer (8 functions) mapped to every live caller, enabling safe handover during a senior colleague's absence.

CORE COMPETENCIES

ServiceNow modules: ITSM (Incident, Problem, Change, Request, Major Incident, Knowledge, SLA), CSM (Case Management), ITOM/Discovery data validation, CMDB & Asset Management (Hardware/Software Asset, CI relationships), PPM (Project & Financials), Field Service Management (Work Orders), Service Catalog, Service Portal, Install Base

Development: JavaScript, GlideRecord, GlideAggregate, GlideAjax, GlideSystem, GlideDateTime, Business Rules, Script Includes, Client Scripts, UI Policies, UI Actions, UI Pages, UI Macros, Scheduled Jobs, Events & Notifications, ACLs, Record Producers, Custom Scoped Applications, HTML, CSS, AngularJS

Automation & workflow: Flow Designer, Subflows & Actions, Workflow Editor, Approval routing, Service Catalog workflows, IntegrationHub Spokes

Integration: Scripted REST APIs, REST & SOAP Web Services, REST Messages, OAuth/token-based authentication, Transform Maps, Import Sets, Data Sources, Active Directory import, Inbound Email Actions, third-party portal and monitoring-tool integrations

Platform operations: Update Sets & release management (Dev → Test/Stage → Prod), Script Tracer & Script Debugger, sys_audit / sysevent / syslog analysis, bulk data correction with dry-run validation, performance and defect triage, production support (L3), instance administration

Ways of working: Agile / Scrum, Jira, sprint delivery, user stories & acceptance criteria, UAT coordination, technical documentation, knowledge articles, peer review, mentoring, stakeholder & customer liaison, ITIL v4 processes

ServiceNow Consultant — Sopra Steria**2021 – Present**

Birmingham, UK · Enterprise ServiceNow delivery and L3 support for a UK telecoms / connectivity provider on a heavily customised instance

- **Solution design:** Lead requirements analysis with tech leads and business analysts; translate business needs into technical design documents across ITSM, CSM, PPM, FSM and custom scoped applications.
- **Integration development:** Design and build Scripted REST APIs, outbound REST/SOAP web services and IntegrationHub spoke flows connecting ServiceNow with partner portals, supplier work-order systems, ScienceLogic SL1 monitoring, Companies House and Azure Translator (IntegrationHub spoke); implement token-based guest access for external users.
- **Custom development:** Deliver Flow Designer approvals and subflows, Service Catalog items and record producers, Service Portal widgets, UI Pages and UI Actions; write Business Rules, Script Includes and scheduled jobs to platform coding standards.
- **Production support & root-cause analysis:** Own Level 3 escalations: reproduce in dev, isolate the exact cause using Script Tracer and audit/event history, validate the fix by simulation against live data, release through update sets and correct affected records with dry-run-verified scripts.
- **Data integrity:** Run platform-wide analyses to quantify a defect's impact before fixing it; deliver verified record lists and plain-language findings to Finance and Operations stakeholders.
- **Governance & mentoring:** Enforce coding and design standards through peer review; document APIs, handovers and known risks; mentor junior developers in troubleshooting complex platform behaviour.
- **Stakeholder management:** Primary technical liaison with the customer — requirements workshops, platform capability training and transition of implementations into BAU support.

ServiceNow Administrator / Developer — Core Technologies**2020 – 2021**

Stockholm, Sweden · Enterprise instance supporting 5,000+ users

- **Platform administration:** Managed day-to-day operations, intake and requirements gathering for corporate-wide changes; configured SLAs, SLA workflows and notifications to meet contractual obligations.
- **ITSM delivery:** Enhanced Incident, Problem, Change, Request and Service Catalog; organised UAT sessions and executed production deployments via update sets.
- **CMDB & Asset Management:** Implemented CMDB and Asset Management with CI relationships; built Active Directory imports using data sources and transform maps; validated discovery data with infrastructure, network and asset teams.
- **Configuration & automation:** Developed Client Scripts, UI Policies, UI Actions, Script Includes and Business Rules; configured Service Desk chat; authored knowledge articles and system design documentation.

SELECTED WORK

Integration: Partner portal REST API and cease/ETF flow · vendor work-order API with strict UK date parsing · SL1 transform-map abort rules · Companies House client enhancement · language-detection confidence threshold via Azure Translator

Custom apps & portals: Token-secured Subcontractor Portal · Request for Change portal widget and child-ticket auto-creation · record producers for provisioning and user creation

Workflow: Approval routing by market sector in Flow Designer · opportunity term mapping subflow fix with historical backfill · Major Incident notification suppression

Data & CMDB: Asset receipting, pick-list and transfer-order defect fixes · hardware/software model data-quality analysis · project-financials and circuit-capex corrections

Root cause: Ready-for-Billing finance-task investigation · sold-product insert failure (update() on uncommitted record) · silent price-overwrite in Opportunity-Won billing rule

CERTIFICATIONS

ServiceNow Certified System Administrator (CSA) · ServiceNow Certified Application Developer (CAD) · ServiceNow Certified Implementation Specialist – ITSM (CIS-ITSM) · ITIL Foundation

EDUCATION

M.Sc. Product Development — Chalmers University of Technology, Sweden

2019 – 2021

B.Eng. Mechanical Engineering (Hons) — University of Birmingham, UK

2015 – 2018
